Cost effective design/build of high-performance renewable energy systems

Your energy partner

IES 115kW system at The New Children's Museum (San Diego)

Founded in 1998, Independent Energy Solutions, Inc. (IES) is a full-service, renewable energy development, engineering, and construction firm with industry-leading experience in photovoltaics (PV) and support infrastructure. IES projects span the globe and come in every size from small commercial to full, utility-scale applications.

The total solution

IES provides the "total solution" -- one that's tailored to your energy needs, local rate structures, available rebate and incentive programs, and unique site requirements. We do all the appropriate design, engineering, procurement and construction needed to make sure your system is safe, reliable and cost-effective. Regardless of project size, location or complexity, IES is committed to providing its customers with excellent service.

IES 120kW system at world-renowned Reuben H. Fleet Science Center

Capabilities

Expertise

- Photovoltaics (solar electric)
- Conventional generation
- Hybrid generation
- On-grid / off-grid
- Battery storage
- Infrastructure and facilities

Services

- Design / build
- Procurement
- Training
- Project management
- Maintenance
- Retrofits & decommissioning
- Rebates & incentives

- Documentation & regulatory
- Power purchase agreements (PPAs)

Applications

- Facility power
- Utility grid-tie
- Off-grid remote
- Water pumping
- Emergency backup
- Disaster relief
- Rural electrification

Sectors

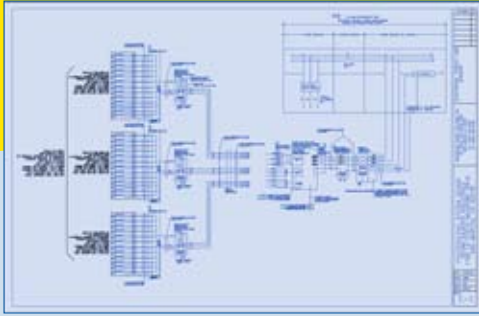

- Commercial
- Industrial
- Public agency

- Defense
- International

Key Customers

- Pfizer
- QUALCOMM
- SDG&E
- Southern Calif. Gas Co.
- APS (Pinnacle West)
- Hunter Industries
- Harper Construction
- U.S. Military (all branches)
- City of San Diego
- The Nature Conservancy
- National Park Service
- Federated States of Micronesia

Steps to renewable energy

Contact us

We offer free site assessments. Remember, we don't just do solar -- we also do complex hybrid systems, off-grid, storage and infrastructure. Our solutions are tailored to YOUR needs.

Site assessment

One of our engineers will visit your site to see what's possible. We review your location, structures, energy use, demand curves, available rebates, schedules, and of course, budget.

Energy efficiency

Saving energy can be as important as generating it. We'll help you fit energy efficiency into your overall plan.

Proposal

We prepare a detailed proposal for you including basic designs, bill of materials, permitting, schedules, warranties and budgets.

Procurement

Once the proposal is approved, we purchase your materials, supplies and equipment.

Construction & installation

We build any needed infrastructure and install your system.

Inspection & certification

We make sure your system passes all needed inspections and certifications needed for commissioning and/or grid connection.

Rebates & incentives

IES handles the necessary paperwork and approvals with public agencies, utilities and administrators.

Training, maintenance & monitoring

IES provides training, remote performance monitoring and ongoing maintenance services to ensure your system performs optimally.
